

## **Biodiversity Policy**

As a Green Energy Solutions Integrator, Sino-American Silicon Products Inc. (SAS) focuses on renewable energy project development, operations and maintenance (O&M), energy storage, and energy-saving services, and further extends our value proposition to critical materials. In response to the dual crises of climate change and biodiversity loss, and as a driver of the energy transition, we are committed to integrating the principles of **Nature Positive** and **No Deforestation** into every decision we make while pursuing business growth. By minimizing our impacts on natural capital across operations and value chain, we are shaping a future where business and nature thrive together.

### **Our Commitments and Actions**

- **Responsible site selection to avoid sensitive areas**  
During the planning and development of renewable energy projects and operational sites, we prioritize ecological sensitivity assessments. We proactively avoid nationally and internationally recognized biodiversity hotspots and protected areas, preventing adverse impacts on habitats and ecosystems.
- **Partnering across the value chain to reduce environmental footprint**  
We promote a green supply chain by working with value chain partners to improve resource efficiency, strengthen pollution prevention and control, prohibit illegal logging activities, and procure materials from sustainable sources. Together, we reduce pressures on forest, protect soil and water, and safeguard wildlife habitats.
- **Taking action to give back to nature**  
We support **Nature-based Solutions (NbS)** and participate in biodiversity-friendly initiatives. Through tangible actions, we contribute to nature and help safeguard local ecosystem services, enhancing environmental resilience and biodiversity.

- **Deepening renewable energy to generate climate co-benefits**

We view our core businesses—renewable energy and energy storage services—as key pathways to biodiversity protection. By delivering clean energy solutions that drive decarbonization, we tackle climate change at its source and help the industry reduce climate-related impacts on ecosystems.

- **Compliance, transparency, and integrity**

We strictly comply with applicable environmental laws and regulations in all locations where we operate, monitor international conservation trends, and regularly review implementation progress. We transparently report on our management performance and uphold our commitment to sustainable operations.
